DAY 10 - BEGINNER

Beginner Capstone: One-Table Analysis

Primary tool: Google Sheets

What you are learning

End-to-end beginner workflow: understand, clean, calculate, summarize, visualize, check and explain.

Learning objectives

- Complete a small analysis independently
- Reconcile totals
- Present concise findings

Worked practical

Analyze a community training dataset from raw records to management summary.

Source / Input	Method	Output / Check
Raw data	Apply the lesson skill	Result linked to source
Change one input	Recalculate / rerun	Confirm expected change
Control total / test	Validate	Explain the result

Guided practice

1. Recreate the lesson idea on a small example.
2. Change inputs and predict the result before recalculating.
3. Complete the supplied independent dataset in the required tool.
4. Create a control check or reconciliation.
5. Explain the result in ordinary language.

AI coaching

After completing the project, ask AI to act as an assessor and question your choices; do not let it rewrite your workbook.

AI discipline

Attempt first. Use AI for explanation, hints, debugging, critique, test cases and mock questioning. Never submit output you cannot explain and independently verify.

Independent exercise

Beginner capstone: training performance report.

Common failure modes

- Wrong grain or key.
- Formula/query/code answers a different question.
- Missing or unmatched records are silently ignored.
- Findings are not reconciled to the numbers.
- AI-generated logic is accepted without testing.

Mastery gate

[ ] I can reproduce the method without copying.
[ ] I can trace the result to the source.
[ ] I have a QA/control check.
[ ] I can explain a limitation.
[ ] I can answer an assessor's follow-up question without asking AI.
