DAY 40 - PRO

Pro Capstone

Primary tool: Python + BI + QA

What you are learning

Automated multi-source analysis with reproducible cleaning, QA, dashboard-ready outputs and documentation.

Learning objectives

- Automate pipeline
- Validate outputs
- Create executive outputs
- Document assumptions

Worked practical

Build a repeatable analysis package from multiple raw files.

Source / Input	Method	Output / Check
Raw data	Apply the lesson skill	Result linked to source
Change one input	Recalculate / rerun	Confirm expected change
Control total / test	Validate	Explain the result

Guided practice

1. Recreate the lesson idea on a small example.
2. Change inputs and predict the result before recalculating.
3. Complete the supplied independent dataset in the required tool.
4. Create a control check or reconciliation.
5. Explain the result in ordinary language.

AI coaching

Use AI as a code reviewer and skeptical analyst; retain human ownership of all conclusions.

AI discipline

Attempt first. Use AI for explanation, hints, debugging, critique, test cases and mock questioning. Never submit output you cannot explain and independently verify.

Independent exercise

Pro capstone: automated analytical pipeline.

Common failure modes

- Wrong grain or key.
- Formula/query/code answers a different question.
- Missing or unmatched records are silently ignored.
- Findings are not reconciled to the numbers.
- AI-generated logic is accepted without testing.

Mastery gate

[ ] I can reproduce the method without copying.
[ ] I can trace the result to the source.
[ ] I have a QA/control check.
[ ] I can explain a limitation.
[ ] I can answer an assessor's follow-up question without asking AI.
