DAY 47 - EXPERT

AI-Assisted Analytics Workflow

Primary tool: AI + Analytics

What you are learning

Using AI for explanation, debugging, hypothesis generation, critique and documentation without surrendering verification.

Learning objectives

- Choose appropriate AI role

- Protect sensitive data

- Verify AI claims

- Document AI-assisted work

Worked practical

Run a controlled AI-assisted analysis using a verification log: prompt, AI claim, evidence checked, final decision.

Source / Input	Method	Output / Check
Raw data	Apply the lesson skill	Result linked to source
Change one input	Recalculate / rerun	Confirm expected change
Control total / test	Validate	Explain the result

Guided practice

1. Recreate the lesson idea on a small example.
2. Change inputs and predict the result before recalculating.
3. Complete the supplied independent dataset in the required tool.
4. Create a control check or reconciliation.
5. Explain the result in ordinary language.

AI coaching

Use AI as tutor/reviewer/adversary; never treat its output as a source of truth.

AI discipline

Attempt first. Use AI for explanation, hints, debugging, critique, test cases and mock questioning. Never submit output you cannot explain and independently verify.

Independent exercise

Create an AI-assisted analysis verification log.

Common failure modes

- Wrong grain or key.
- Formula/query/code answers a different question.
- Missing or unmatched records are silently ignored.
- Findings are not reconciled to the numbers.
- AI-generated logic is accepted without testing.

Mastery gate

[ ] I can reproduce the method without copying.
[ ] I can trace the result to the source.
[ ] I have a QA/control check.
[ ] I can explain a limitation.
[ ] I can answer an assessor's follow-up question without asking AI.
